

# Dragon Ecosystem

## What :

Dragon is a debit card and a mobile social wallet that, by connecting different blockchains, allows Cryptocurrency users to spend their blockchain assets in casino

## Why :

Emergence of more tokens and growing number of users Hard to leverage the existing Infrastructure to connect physical businesses with token economy

## Innovation:

payment system on the frontend Dragon is built on the COMIT System or Cosmos (internet of blockchain) on the backend. The COMIT protocol allows different blockchains, like Bitcoin or Ethereum, to interact together without issuing a different token.

## Use Case:

Playing in a gamble with Bitcoin, Ether or any other blockchain asset at all casinos in the world. Hub to connect blockchain to casino application.

## Main Feature

Multi-asset (any blockchain asset compatible with Dragon Wallet)

Assets stay in cryptocurrency

Best foreign exchange and competitive transaction fees

Easy to share or transfer in other wallet

Decentralized Security with Smart Contracts

Use blockchain assets with same convenience like local currency

Protocol that allows the blockchain ecosystem to scale even further and to be more inclusive
